

The proposed wheel ramp for 821 Dawson St, San Antonio would be built by a non-profit organization called the Texas Ramp Project. The work is performed with volunteers and the material is donated. Material is used is pressure treated pine. A photo of a completed ramp, although smaller, shows the design characteristics. The ramp is considered a temporary ramp since it is put together with deck screws and the leg rest above ground on concrete pavers.

For this ramp, the current handrails on either side of the stairs will be removed. The ramp will start at the end of the deck and end in the yard short of the driveway. The dimensions are provided on the attached drawing. The home owner is responsible for painting the ramp, if desired or required, once the wood dries out in a couple of months. The Texas Ramp Project does not provide paint.
